## MANUFACTURER'S INSTALLATION RECOMMENDATIONS FOR SecureAll™ BULLET RESISTANT PANELS

### Health & Safety Precautions

SecureAll™ Bullet Resistant Panels come under the category of Laminated FRP (fiber reinforced plastic) products. It is important for installers of fiberglass products to be properly supplied with basic health and safety equipment such as:

- Gloves - cotton or leather to provide protection from cuts and abrasions associated with handling, drilling or cutting fiberglass materials.
- Dust/Particle masks or respirators to provide respiratory protection against dusts associated with cutting or drilling fiberglass materials. Two good products on the market are Moldex 2300 Dust & Mist Respirators and Drager-Picco 20 Respirator Filters for Dust & Mist.
- Protective Wear to be worn over clothing to provide protection from fibrous dust that can settle in the clothing or on the skin when cutting, sanding or drilling fiberglass materials. DuPont makes an excellent protective wear product called Tyvek ProtectiveWear.
- Protective Eyewear- especially when cutting, sanding or drilling fiberglass materials.

The above listed items should be worn if workers will be cutting, sanding, or drilling fiberglass materials.

### Storage Precautions

We recommend that SecureAll™ Panels be stored inside under cover, stacked flat and off the floor. If moving materials with a forklift is needed, please keep panels stored on the pallets that they were originally received with to avoid cracking, chipping or abrading the panels.

### Installation

SecureAll™ panels can be cut, drilled, or sanded with the following recommendations:

1. **Cutting** - Skillsaw is recommended. Material should be cut slowly with either a Masonry Concrete cutting blade or a diamond tip blade. Cut at a medium speed and don't force the blade or put side pressure on the blade. If dry cutting, please remove blade from cut every minute for a few seconds to cool. A panel or saber saw can be used with a "grit-edge" blade that is designed for cutting composites. One excellent blade for skillsaw cutting is the Tenryu TSD-180D 7" blade (available for purchase from Protective Structures).
2. **Drilling** - When pre-drilling SecureAll™ panels it is recommended to use a carbide or cobalt tip drill bit at medium speed and with medium pressure. Counter-sinking drill holes is acceptable when a flush surface is desired. 1-3/4" wood screws are commonly used to secure panels to wood studs. Self-tapping drywall screws work well when affixing drywall to the SecureAll™ Panels or when affixing the SecureAll™ panels to steel studs.

3. **Sanding** - If you will be laminating materials against the fiberglass panels it is recommended to lightly "rough-up" the panel surface with a sander using a 120 grit paper and medium pressure. If we are notified at the time of your order that you will be laminating, we can sand the panels prior to shipment.
4. **Laminating** - If laminating or gluing to the panels is a requirement, there are many commercial grade adhesives available. We recommend a two-component acrylic, water based adhesive. 3M Super77 Contact Adhesive (available at Home Depot) and Versabond Contact Adhesive may be used for laminating.
5. **Painting** - Fiberglass panels can be painted directly provided the surface is lightly sanded and a primer base-coat is applied. Either oil or water base may be applied. Surface must be wiped clean of all dust, dirt, or grime.

For further installation or technical assistance, please phone, fax or email to us at:

Protective Structures, Ltd.  
7565 Industrial Court
