

Indoor/Outdoor Installation

Impact Tested & Engineered to FEMA 320/361

## StormDefend™ Guardian Safe Room

Protective Structures is proud to introduce the StormDefend™ Guardian Series above ground tornado shelter by Atlas Safe Rooms. Comprised of 7 gauge steel construction, Guardian safe rooms are manufactured to be the highest quality and among the strongest units available in today's marketplace. The vault-like door, modular construction and variety of sizes makes this StormDefend shelter an innovative solution for protecting both people and property.

Tested to withstand an EF-5 (250 mph) tornado, the Guardian series safe room doubles as a panic room and walk-in vault, adding value to any home at a minimal cost.

### StormDefend™ Guardian Safe Room benefits include but are not limited to:

- Protection for homeowners and their family against small arms fire, intrusion, and tornadoes
- Protection of valuables and weapons against burglary and vandalism
- 50% stronger than most above ground shelters currently available
- 24" Modular panels allow for easy installation, relocation and extension for larger sizes
- Easily incorporated into new or existing home
- Indoor/Outdoor installation on minimum 4" concrete pad
- Wide variety of designs from 4' x 2' to 6' x 10' for families of all sizes

The average tornado victim has less than 60 seconds warning that the tornado is going to strike the home. When most people hear the urgent warning "Seek shelter immediately!" they have nowhere to run. Most deaths and grievous injuries result from being hit by wind-borne debris outside the home. Provide your clients the security and peace of mind with in-home protection available to them when seconds matter.

We would be happy to present this information to you and/or your clients anytime. Call today and let us know how we can assist you!
